

Admin Panel Guide

WABA Panel 2026 — NodeJS Edition

The owner's manual: manage customers, pricing, payments, branding & more.
Every screen shown with real screenshots.

KKHS Media Private Limited

190A Krishna Kunj, Kalwar Road, Jaipur, Rajasthan 302012
Mob: 9782005500 | Email: info@kkhsmedia.com | GST: 08AAICK3853C1ZL

Welcome — This is the Owner's Control Room

This guide is for **YOU, the panel owner (Super Admin)**. The Admin Panel is where you run your business behind the scenes: create pricing plans, add and manage your customers (vendors), approve payments, set up payment gateways, brand the panel with your own name & logo, manage content, and keep your license & updates in order.

IN SIMPLE WORDS Admin vs Client — what's the difference?

The **Admin Panel** (this guide) is for you, the owner — it controls the whole platform, pricing, and all customers. The **Client Panel** (separate guide) is what each of your customers uses day-to-day to send WhatsApp messages, chat, and run campaigns.

Every screen below is shown with a real screenshot so you can recognise it instantly. Open your admin area and follow along.

1. Logging in as Admin

Open your panel address (e.g. <https://panel.yourbrand.com>) and log in with the admin email & password you created during installation. After login you land on the Admin Dashboard. The left menu is your main navigation — every feature below lives there.

2. Admin Dashboard — Your Business at a Glance

The first screen shows the health of your whole platform in real time.

The Admin Dashboard: signups, revenue, vendors, plans, wallets and system health.

- **Today at a Glance** — new signups, revenue, messages and payments received today.
- **Platform Overview** — total & active vendors, total revenue, active plans, workspaces, messages sent/received and AI calls.
- **Wallets Total** — the combined balance across all customer wallets.
- **Action Needed** — pending payments or expiring plans that need your attention.

3. Vendors — Manage Your Customers

Every customer who signs up becomes a **Vendor** with their own workspace. From here you can view, search, edit, suspend, or log in as any vendor to help them.

The screenshot displays the WabaPanel Admin Panel interface. On the left is a sidebar with a search menu and various navigation items: Dashboard, Vendors (highlighted), Accounting, Inquiries, Coupons, Announcements, System Health, One Click Signup, Settings, Client API Docs, Panel Updates, License & Updates, Support Tickets, and User Guide. The main content area is titled 'Vendors' and includes a subtitle 'Manage vendor accounts separately from regular users' and an '+ Add Vendor' button. Below this is a search bar for vendors by name, email, or company. A table with the following columns is shown: VENDOR, COMPANY, PLAN, STATUS, MESSAGES (30D), WALLET, TOTAL SPEND, LAST LOGIN, and JOINED. The table body is empty, displaying 'No data found'. At the bottom left of the sidebar, the user 'Super Admin' is logged in.

Vendors list: every customer account, their plan, status and wallet.

- See each vendor's plan, status, wallet balance and join date.
- Click a vendor to view details, change their plan, or top-up their wallet.
- Use **Login as vendor** to see exactly what they see — perfect for support.
- Suspend or activate accounts with one click.

4. Plans — Create Your Pricing

Plans are the packages you sell. Create as many as you like (e.g. Starter, Pro, Business) and set exactly what each one allows.

Plans & Subscriptions

Create and price subscription plans for your clients

Create Plan

PLAN	PRICE	STATUS	SUBSCRIBERS	
Free	Free	active	0	 
Silver	₹2000/lifetime	active	0	 
Unlimited	₹9999/lifetime	active	0	 

Plans: define what each subscription includes and its price.

- Set price, billing cycle (monthly/yearly), and a free-trial period.
- Set limits: number of contacts, messages, team members, channels, AI credits, etc.
- Turn features on/off per plan (bots, AI, campaigns, catalog, and more).
- Mark a plan as Popular to highlight it on your pricing page.

TIP Start simple

Begin with 2–3 plans. You can always add more later. Customers pick a plan at signup or upgrade from their Client Panel.

5. Subscriptions

This shows every active and past subscription — which vendor is on which plan, start & renewal dates, and status. Use it to track revenue and spot expiring plans.

USER	PLAN	AMOUNT	GATEWAY	STATUS	TRANSACTION ID	DATE	INVOICE
No payments recorded							

Payments: approve manual payments and download invoices.

- Review a manual payment's proof, then **Approve** or **Reject** it.
- Approving instantly activates the customer's plan / adds wallet balance.
- Download or email invoices to customers.
- Filter by status, date or vendor.

7. Wallet — Prepaid Balance

The panel supports a prepaid wallet system. Customers top-up a wallet and message costs are deducted from it. Here you see the full ledger and can manually adjust any vendor's balance.

Put your customer engagement on autopilot. Send broadcasts, deploy AI chatbots, automate workflows, and manage conversations — all from one powerful platform.

Cta Primary

Start Free Trial

System Preferences: set your App Name, email, and description.

- **General** — App Name, App Email, description, session timeout.
- **Branding** — upload your logo, favicon and brand colours.
- **Invoice** — your company details that appear on customer invoices.
- **Email SMTP** — connect your email so the panel can send login, invoice & alert emails.
- **AWS S3 / Limits / Wallet / Maintenance** — storage, global limits and maintenance mode.

TIP Do this first

Set your App Name, logo and SMTP email right after install — then every email and screen carries your brand, not ours.

12. License & Updates

Activate the panel with the license key we emailed you (starts with NJSP-). This page also shows your license status and lets you pull panel updates when we release them.

No addons available yet. New addons published on the KKHS store will appear here automatically after the next sync.

How It Works

- Your panel syncs with KKHS Media server every 12 hours automatically
- Feature locks, remote config, notifications, and addons are updated on each sync
- Software patches are auto-applied when available — no manual update needed

License & Updates: activate your key and get new versions.

IN SIMPLE WORDS One license = one domain

Your license activates on the domain you installed on. To move domains, deactivate here first, then activate on the new one — or just ping us.

13. Content: Landing Page, Blog, Pages & Knowledge

Your panel comes with a public website and content tools so you can market and support your product without a separate site.

15. AI Settings (Platform)

Configure the AI engine that powers chatbot replies and AI voice calling across the platform — connect your AI provider key and control how AI credits are allocated to plans.

The screenshot displays the 'AI Intelligence' section of the WabaPanel admin interface. The left sidebar contains navigation links: Dashboard, Vendors, Accounting, Inquiries, Coupons, Announcements, System Health, One Click Signup, Settings (active), Client API Docs, Panel Updates, License & Updates, Support Tickets, and User Guide. The main content area is titled 'AI Intelligence' with a subtitle 'Configure AI model providers' and a 'Save All' button. It features four configuration cards for different AI providers, each with an 'Inactive' checkbox and input fields for Model, API Key, and Endpoint.

Provider	Model	API Key	Endpoint	Inactive
OpenAI	gpt-4o	OpenAI API key	https://api.openai.com/v1	☐
DeepSeek	deepseek-chat	DeepSeek API key	https://api.deepseek.com/v1	☐
xAI Grok	grok-beta	xAI Grok API key	https://api.x.ai/v1	☐
Google Gemini	gemini-pro	Google Gemini API key	https://generativelanguage.googleapis.com/v1	☐

AI settings: platform-level AI provider & credit configuration.

Need help? Admin & setup support is included with your license.
